SUMMARY OF EXPERIENCE

I began my career in asbestos and health and safety consultancy in 2006, and have extensive first-hand experience in identifying various uses of asbestos-containing materials. I have conducted asbestos surveys and inspections in thousands of industrial, commercial and domestic properties, and have carried out analytical monitoring and site management during a range of complex asbestos removal and remediation projects.

Throughout my consultancy career, I have been involved in the provision of technical advice and solutions, including the interpretation of complex asbestos data and records. I have produced detailed survey and remediation specification documents and asbestos management plans; audited employers' asbestos policies and procedures; driven best-practice asbestos management; and audited licensed asbestos removal projects on site.

I am experienced in the provision of expert advice and opinion in relation to buildings insurance claims and asbestos-related disease. I have delivered BOHS, UKATA and IOSH certified training on a variety of subject matter, including: the duty to manage asbestos, P402 surveying and sampling, IOSH managing safely, asbestos awareness, and licensed/non-licensed asbestos removal.
