SUMMARY OF EXPERIENCE

I have over 18 years of experience in identifying, surveying, and managing the risks associated with asbestos containing materials. My experience includes assessing and advising on asbestos risks across a range of commercial, industrial and domestic properties.

I have carried out hundreds of asbestos surveys and thousands of inspections involving identification of asbestos containing materials. I have also carried out exposure and air monitoring during a range of asbestos removal projects including those associated with complex works involving high risk materials.

During my role as a Technical Specialist working for Yorkshire Water, I was responsible for determining and implementing strategies for managing asbestos containing materials across multiple sites. I was also responsible for providing advice to duty holders to assist them in ensuring and demonstrating compliance with asbestos related legislation and best practice.

I accept instructions from industrial clients as well as in connection with legal proceedings from Claimant or Defendant Solicitors or on a 'joint instruction' basis.
